

Infinity Data Systems, LLC

Project Proposal

Prepared for: Anthony Johnson, IT Manager

Prepared by: Matt Milano, Project Manager

August 4, 2010

Proposal number: IDS080410

Infinity Data Systems, LLC

Executive Summary

Objective

To develop a web-based system that will allow Empire Food personnel to enter and update pricing data.

Goals

The primary goals are as follows:

- 1) Allow field personnel to enter and edit data via laptop or mobile device.
- 2) Allow vendors segregated, read-only access to data pertaining to their products.
- 3) Provide administration for Empire Foods to manage field personnel, vendors and calendars.
- 4) Lay a foundation that future products can plug into and build upon.

Solution

Ruby on Rails (RoR) web application with a MySQL backend database.

Project Schedule

Server Setup and Database Development:

1 Week

RoR Front End Design and Development (including interface design):

3 Weeks

Testing, Debugging and Documentation:

1 Week

Onsite Training:

Provided

Support

Bug Fixes:

6 months included

Infinity Data Systems, LLC

Budget

\$17,200.00

30% due at start of project

30% due upon completion of Database Design and Development

40% due upon completion of project and installation/training

\$150/mo Dedicated Server (to host web application)

Proposed Start Date

August 10, 2010

Proposed Completion Date

September 15, 2010

About Infinity Data Systems, LLC

Infinity Data Systems, LLC is staffed with developers who have decades of software development experience. Infinity Data Systems, LLC leverages that experience in the creation of commercial and custom software, both desktop and web-based, for clients ranging from startups to Fortune 500 companies and major universities.
